Completed on	Friday, 21 August 2026, 4:10 PM
Time taken	2 mins 18 secs
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time

complexity using counter method.

```
void function(int n)
{
    int c= 0;
    for(int i=n/2; i<n; i++)
        for(int j=1; j<n; j = 2 * j)
            for(int k=1; k<n; k = k * 2)
                c++;
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```c
#include <stdio.h>

void function(int n)
{
    int c = 0;
    int count = 1;   // count c = 0

    for (int i = n / 2; i < n; i++)
    {
        count++;     // i < n

        for (int j = 1; j < n; j = 2 * j)
        {
            count++; // j < n

            for (int k = 1; k < n; k = k * 2)
            {
                count++; // k < n
                c++;
                count++; // c++
            }

            count++;     // final k < n
        }

        count++;         // final j < n
    }

    count++;             // final i < n

    printf("%d", count);
}

int main()
{
    int n;
    scanf("%d", &n);
```

```
39      function(n);
40
41      return 0;
42  }
```

	Input	Expected	Got	
✔	4	30	30	✔
